**BioPharma Systems signs Raleigh area sales agreement with
Camfil Farr (BioPharma Segment)**

On July 7th 2008, BioPharma Systems, Springhouse PA, agreed to exclusively represent an extensive range of clean air, containment and filtration products from Camfil Farr focusing on the Bio-Pharma industry segment in the Raleigh NC area.

BioPharma Systems is a recently formed collaboration between Mark Walkush and David Pallister, (formerly Extract Technology Ltd.) to provide up to date high quality technical sales support to our end user and local engineering firm client base across a variety of Pharmaceutical and Biotech applications involving containment, aseptic processing, clean room design, laminar flow/clean air technology, sterilization and filling systems.

Our company has a combined 25+ years of experienced support to the industry in matters relating to upfront design, sourcing, and scoping a variety of systems not to mention value added integration of OEM components into our established range of products.

We feel that the BioPharma Systems partnership with Camfil Farr including the technology brand Farr APC(Dust Collection equipment), thru its US and European technical and manufacturing support will provide our US client base with high quality solutions thru custom and standard product offerings engineered to suit all project requirements backed with validation documentation and field service/startup.

An important fact behind the decision by BioPharma Systems to enter into the Camfil Farr agreement was in Camfil Farr's established US fabrication of many of the products offered by the group as well as commitment to 'customize,' to accommodate wide ranging customer needs. Camfil Farr has established US fabrication facilities in NC, NJ, CA, IL and Canada providing positive significance to our customer's demands for necessary local equipment source. The main scope of products offered by BioPharma Systems will initially be;

- Camfil clean air filtration and containment systems.
- Farr APC dust collection equipment
- Telstar ACE Containment solutions including isolators and airflow protection.
- Aseptic processing solutions.
- Telstar ACE Laminar flow systems
- Telstar ACE BioSafety Cabinets.
- Sterilization products.
- Custom filling solutions

BioPharma Systems looks forward to servicing our clients, principal partners and agent network throughout North America, Canada and Puerto Rico with high quality service and support for our designated product offerings.
