**BioPharma Systems signs North American sales agreement with  
Telstar Life Science Division**

On November 26th, BioPharma Systems, Springhouse PA, agreed to exclusively represent an extensive range of clean air, containment and aseptic/sterilization products from Telstar Life Science Solutions, a division of Telstar.

BioPharma Systems is a recently formed collaboration between Mark Walkush and David Pallister, (formerly Extract Technology Ltd.) to provide high quality technical sales support to our North American client base across a variety of Pharmaceutical and Biotech arenas including containment, aseptic processing, laminar flow/clean air technology, sterilization and filling systems.

Our company has a combined 25+ years of experienced support to the industry in matters relating to upfront design, sourcing, and scoping a variety of systems not to mention value added integration of OEM components into our established range of products.

We feel that the BioPharma Systems partnership with the Telstar Life Science Division including the technology brand Telstar ACE (Applied Containment Engineering), thru its European and US support will provide our US client base with high quality solutions thru custom and standard product offerings engineered to suit all project requirements backed with validation documentation and field service/startup.

An important fact behind the decision by BioPharma Systems to enter into the Telstar Life Science agreement was in Telstar's ability for US fabrication of many of the products offered by the group in the forthcoming, PA Facility. Telstar have invested in fabrication facilities in Spain, UK and Holland (Luwa BV) as well as China in the past for certain of its product lines but the US fabrication decision is of significance to our customers demands for a long overdue local equipment source. The main scope of products offered by BioPharma Systems will initially be;

- Containment solutions including isolators and airflow protection.
- Aseptic processing solutions.
- Laminar flow systems
- BioSafety Cabinets.
- Sterilization products.
- Custom filling solutions

BioPharma Systems looks forward to servicing our clients, principal partners and agent network throughout North America, Canada and Puerto Rico with high quality service and support for our designated product offerings.
